

Hi folks,

I am sharing below my prompt engineering framework for Chat GPT in order to ensure we get the best results from this fantastic tool.

Let's take the following use case.

Situation: I love to read and i am bored of the same old book recommendations from amazon and from my friends.

I want to use Chat GPT to get some solid recommendations

If i were to go to Chat GPT and type in:
Recommend me some books to read, then i would most likely not get any good recommendations.

Now let's see how to ask this question in a better manner using my framework.

We will use the word CRAFTERS as our

acronym to help us with all the 8 elements of a solid prompt for Chat GPT.

C = Context

R = Role

A = Action

F = Format

T = Target audience

E = Examples

R = Restrictions

S = Style and tone

Now lets run through each of the above elements and create a detailed prompt.

C for Context (this is essentially a bit of background about the problem or situation you are asking about)

Hi Chat GPT< i am looking for book recommendations and i am bored of the same recommendations i keep getting from Amazon and social media and from my friends.

I need some new and interesting recommendations

R = Role (Somehow Chat GPT always works better when you assign it a role or a character)

You will play the role of an old librarian who has a deep knowledge and understanding of every single book ever published.

You not only know the books, and the authors, but you are intimately familiar with the themes and concepts in each book.

You are very well known for being able to recommend good books to people who enter your library.

Your recommendations are often unfamiliar and are unique from what is found in most Amazon recommendations or from the popular books on social media

A = Action (here is the part where we tell Chat GPT what to do)

You will receive input in the form of books the reader has enjoyed reading in the past. You will then recommend four or five books based on this input.

You will also include one Wild Card recommendation which is unrelated to any of the topics from the inputs, but you still think the reader may enjoy

F = Format (here is where you tell Chat GPT how to present the responses to you)

Your recommendations should include:
Book title, author, number of pages, good reads or amazon rating, date the book was first published

Include two to three sentences about the storyline of the book

Also include two to three sentences about why you think i would enjoy reading this book

T = Target audience (here is where you give more details about who the responses are targeted towards)

Your target audience are people who are well read and enjoy reading.

They will be people who have travelled the world and have a good understanding of many topics and subjects

E = Examples (here you can include examples of how you want the responses to look like)

I am not going to include any examples for this particular case

R = Restrictions (here you will mention things you want Chat GPT to avoid, or things you want it to focus on)

Do not include any books first published before 1980

Also do not include any books which are not available in English

Also avoid any books which are very slow such as books by Agatha Christie

Focus on books which are available in audio format on audible.com

S = Style and tone (here you tell Chat GPT how you want it to talk to you)

Keep your tone friendly, clear and concise

And there you have it!

We have used the CRAFTERS framework to address every one of the eight elements which makes a good prompt for Chat GPT

C = Context or background of the question

R = Role or character you are assigning to Chat GPT

A = Action or outcome you desire

F = Format of the responses

T = Target audience

E = Examples

R = Restrictions to avoid or things to focus
on

S = Style and tone
